

ESSENTIALSERVER™ CASE STUDY LEGAL

Clark, Wilson - BC's Law Firm for Business Relies on the EssentialServer

The Challenge

Clark, Wilson is one of Vancouver's larger law firms with over sixty lawyers representing British Columbia businesses. With a significant amount of correspondence now being conducted via email, Clark, Wilson realized it needed an independent system to provide data backup of email archives.

When Don Kerr, Systems Manager for Clark, Wilson, started looking for a secondary backup system, he wanted to implement one that was self contained and automated.

The Solution

"After looking at our options, I decided that the EssentialServer was the best choice. We needed something that was 100% reliable and easy to use."

Clark, Wilson already had a primary backup system but it wasn't setup to provide storage and backup of emails. With the addition of the EssentialServer, Don Kerr was able to add that necessary level of protection without disrupting current backup procedures. "It took me ten minutes to setup the EssentialServer. It was extremely easy and fast to install. It is completely automated and performs backup at regularly scheduled times."

"The EssentialServer is working very well. Within the next month, I will be looking to expand its use and integrate it into workstation backup," said Kerr.

The EssentialServer offers four levels of protection and security. The data files or stored on the user's computer, saved from the user's workstation to the EssentialServer, are either mirrored or striped across RAID drives and then backed up to tape or CD.

*"After looking at our options, I decided that the EssentialServer was the best choice. We needed something that was 100% reliable and easy to use."
